

AI-Driven Guided Buying

Smarter, More Compliant Purchasing with AI

The AI-Driven Guided Buying experience in Onventis Buyer redefines how employees search and request goods or services. Instead of manually browsing catalogs or understanding valid supplier to buy from, users simply describe what they need and the AI agent recommends the most relevant, compliant items based on organizational settings, supplier data, and purchase history. This ensures faster, more accurate, and policy-aligned buying decisions across the enterprise.

Enter Request

using natural language. You don't need to be a "prompt engineer."

AI Searches

the approved internal catalogs using context like supplier, material group, and purchase history.

Prioritize Items

based on supplier conditions, and core assortment and price filtering.

Quick Options

to view article details or add to your cart directly from chat window.

Suggests Requisition

creation when there are no direct matches found.
