

Onventis integrates Kaunt AI for Sovereign Accounts Payable Automation

Stuttgart, October 13, 2026 – The Source-to-Pay SaaS provider Onventis is expanding its AI capabilities through a partnership with Kaunt, a Danish specialist in AI-powered invoice processing. Integrated into Onventis AP Automation and orchestrated through Onventis ONIX, the AI Operating System for Source-to-Pay, Kaunt adds AI-powered document extraction and account coding. The partnership helps finance teams reduce manual invoice handling, accelerate processing, increase automation rates and maintain financial control.

The collaboration marks another milestone ahead of the official launch of Onventis ONIX at the Onventis Xchange Conference 2026. As the AI Operating System for Source-to-Pay, Onventis ONIX enables organizations to deploy, orchestrate and govern AI capabilities across procurement and finance from a unified environment. By connecting data, AI models and business processes, Onventis ONIX provides the foundation for trusted, scalable AI across Source-to-Pay.

A Specialized AI Within One Intelligence from Source to Pay

The integration reflects the operating model behind Onventis ONIX. Onventis develops proprietary AI capabilities where its Source-to-Pay expertise creates differentiated value while integrating specialised technologies from trusted partners where domain expertise already exists. Kaunt contributes advanced capabilities for document AI and account coding, while Onventis ONIX provides the environment to orchestrate and govern these capabilities. This allows organisations to scale AI across Source-to-Pay without increasing complexity or governance effort. “Finance teams do not need another isolated AI tool. They need specialised intelligence embedded into processes they already trust and control. With Kaunt, we are adding advanced accounts payable intelligence to the Onventis experience while keeping workflows, policies and human oversight firmly within the Onventis environment. This is exactly the approach behind Onventis ONIX: combining Source-to-Pay intelligence with specialised AI capabilities where they create additional value,” says Dolf van den Boorn, Chief Product Officer at Onventis.

More Automation and Control for Finance Teams

Invoice processing remains one of the most practical entry points for AI in finance. By integrating Kaunt's AI capabilities into Onventis AP Automation, organizations can reduce manual work, improve productivity, and increase touchless processing rates. Unlike template-based approaches, Kaunt automatically extracts and structures invoice data. This gives finance teams faster access to trusted information for accounting and cash management decisions. Customers benefit from faster processing, higher automation rates, and improved coding accuracy, all within the familiar Onventis experience. The partnership initially focuses on AI-powered document extraction and account coding, enabling organizations to automate routine processing while keeping finance teams in control of approvals, exceptions and business-critical decisions.

Trusted AI Built on Sovereignty and Control

The partnership reinforces the core principles behind Onventis ONIX: sovereignty, transparency and human-in-the-loop decision making. As organizations expand their use of AI, maintaining control over data, processes, and governance becomes increasingly important. Combining Kaunt's accounts payable intelligence with the governance framework of Onventis ONIX, organizations are enabled to adopt AI without creating fragmented AI landscapes. Finance teams can scale automation while maintaining transparency, auditability, and accountability for business-critical financial decisions.

“Our shared ambition with Onventis is to make advanced finance AI part of the everyday working environment rather than another standalone solution. Kaunt contributes the specialized intelligence for extracting invoice data and providing AI-powered account coding, while Onventis provides the processes, controls and customer experience around it. Together, we help finance organizations increase automation, improve data quality and scale accounts payable operations without sacrificing control,” says Frank Aaquist, CEO of Kaunt. Together, Kaunt and Onventis help organizations reduce processing costs, improve data quality and scale accounts payable automation without increasing control risks. By integrating Kaunt’s specialized capabilities into Onventis AP Automation and orchestrating them through Onventis ONIX, Onventis continues to expand its AI ecosystem while helping customers adopt AI in a practical, governed and business-ready way.

About Onventis

Onventis is the European Source-to-Pay Intelligence. For more than 25 years, Onventis has supported mid-sized enterprises at six locations in making their procurement and finance processes more secure and efficient. Through its modular SaaS product portfolio, Onventis connects an end-to-end source-to-pay process with a European operating model in a protected data environment. This allows procurement and finance departments to maintain full control over data, costs, and processes in compliance with policies and legal requirements. Today, around 1.2 million users from over 1,000 companies with 4.5 million suppliers process an annual transaction volume of 40 billion euros via the Onventis Network. www.onventis.com

About Kaunt

Kaunt is a Danish company that has commercialized embedded AI for finance operations since 2019, headquartered in Copenhagen and Aarhus and operating globally. Kaunt's AI runs inside finance software: ERP, AP automation and procurement platforms embed Kaunt through a single REST API and ship it white-label under their own brand. Kaunt runs in production across Europe, the US, Canada and Australia, automating complex procurement and accounts payable processes. Kaunt's AI use cases are designed for the highest degree of volume, complexity and compliance - certified to ISO 27001 and ISO 27701, with an ISAE 3402 Type II assurance report, and built for GDPR and the EU AI Act. AI-native and stack-agnostic, Kaunt delivers enterprise-grade finance AI that platforms would otherwise spend years building. www.kaunt.com
